

Surf·Lock

Vision Plug-in

- Stop student web surfing
- Remove the temptation of browsing during lessons
- Turn browsing off from the teacher's computer
- Reward students with web access after completed work
- Control research and free browse time
- Use with any browser in a Vision classroom
- Simple and inexpensive, no server required

Block

Turn browsing off from the teacher's computer with a single click. Stop student web surfing instantly for a single student or the entire class.

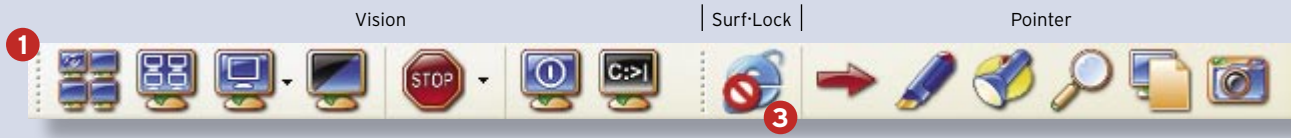

Prevent

Remove the temptation of web surfing during important lessons and discussions. Offer Internet access as a reward to students without disrupting the class.

Compatible

Surf·Lock is compatible with and prevents browsing using any browser and works great in classrooms where Vision is installed.

- 1 **Floating Toolbar** Access your favorite GenevaLogic product features from a simple floating toolbar. The Vision toolbar floats unobtrusively on the teacher's computer screen and slides out of the way when not in use. Use the toolbar for more than just Vision. Personalize your own toolbar to take advantage of one-button access to your favorite features and plug-ins including Surf-Lock (classroom surf-blocking) and Pointer (on-screen annotation).
- 2 **Block Screen** This screen appears when students attempt to surf during class. Surf-Lock blocks access to all websites when surfing has been disallowed by the teacher. Block surfing for a single student, a group of students, or the entire class.
- 3 **Secure Blocking** Surf-Lock works deep in the system so that students cannot bypass the surfing restriction. Unlock surfing for specific students as a reward for finished assignments, or grant research time on the web for projects and lessons.

System Requirements Surf-Lock works in any Windows or Mac environment where Vision is installed.
